Summary

AI Engineer building LLM applications, retrieval-augmented generation (RAG) systems, document-intelligence pipelines, and agentic automation. Hands-on experience with Python, FastAPI, LangChain, LangGraph, OpenAI and Anthropic APIs, vector databases, structured outputs, and tool orchestration. Experience spans document ingestion, semantic retrieval, vulnerability remediation, patch validation, and API-driven operational workflows.

Technical Skills

Programming & Backend: Python, SQL, FastAPI, REST APIs, JSON, API Integration, Git, Linux
Generative AI & Frameworks: Large Language Models (LLMs), LangChain, LangGraph, OpenAI API, Anthropic API, Ollama, Prompt Engineering
Agent Workflows: Tool Calling, Structured Outputs, Multi-step Orchestration, Error-Recovery Loops
RAG & Retrieval: Document Ingestion, Chunking, Embeddings, Semantic Search, ChromaDB, pgvector
Data & Infrastructure: PostgreSQL, Docker, MQTT, NumPy, pandas, scikit-learn
Validation & Interfaces: JSON Validation, Patch Validation, Application Logging, React

Professional Experience

GenNx Tech Solutions Jul 2026 – Present
Junior AI Engineer

- Contributing to document-intelligence ingestion workflows that prepare unstructured content for downstream retrieval and LLM applications.
- Developing modular stages for source integrity, security admission, document extraction, evidence provenance, and canonical content preparation.
- Defining processing contracts and acceptance criteria to distinguish successful execution, validated content, and retrieval-ready outputs.

Sec4Sys Technologies Pvt Ltd Nov 2025 – June 2026
AI Automation Engineer (Freelance)

- Built a LangGraph vulnerability-remediation workflow spanning report parsing, semantic codebase retrieval, CVE/CWE context, LLM patch generation, validation, and pull-request creation.
- Integrated OpenAI and Anthropic APIs with structured JSON validation, tool execution, iterative refinement, and error-recovery loops.
- Exposed agent workflows through FastAPI, containerized components with Docker, and diagnosed multi-step execution failures using application logs.

Techgenius Institute Aug 2025 – May 2026
AI & Robotics Engineer

- Developed API-driven employee-tracking and context-aware notification workflows to replace repetitive manual processing steps.
- Integrated LLM notification workflows with FastAPI and connected sensor/backend systems through MQTT; incorporated stakeholder feedback into prototype iterations.

Selected Projects

Vulnerability Remediation Agent *Python, LangGraph, FastAPI, Docker*

- Built a tool-driven remediation agent combining semantic codebase retrieval, CVE/CWE context, LLM patch generation, iterative validation, and pull-request creation.
- Used structured JSON contracts and recovery loops to separate LLM response validation from executable patch-validation stages.

Enterprise Document Intelligence Pipeline *Knowledge Graph, Hybrid RAG*

- Developing a modular 24-step pipeline for secure document intake, integrity checks, extraction, canonical content preparation, chunking, embeddings, and evidence provenance.
- Integrating a knowledge graph and hybrid retrieval for document intelligence, with processing contracts and acceptance criteria for validated, retrieval-ready outputs. *In progress at GenNx.*

Professional Achievements

- Built an end-to-end AI vulnerability-remediation workflow connecting report parsing and CVE/CWE retrieval to LLM patch generation, validation, and pull-request creation.
- Replaced repetitive employee-tracking and notification steps with API-driven workflows integrating FastAPI, LLM APIs, and MQTT-connected sensor systems.

Education

B.Tech in Computer Science and Engineering 2021 – 2025
Dumka Engineering College CGPA: 8.55/10
